

Frontend Engineer

Description

The position is for one of our client company's which is a leading fintech/security company dedicated to revolutionizing the financial industry through innovative technology solutions.

Job Description

As a Frontend Engineer, you will be an essential contributor to a high-performing, cross-functional team building the next generation of Web3 Financial Compliance SaaS products. Our focus is on creating innovative, no-code/low-code web applications that optimize compliance professionals' time and increase their ability to protect their organizations from sophisticated fraud schemes. Your primary role involves designing and developing customer-facing applications using modern web application frameworks, like Remix.js and Tailwind CSS. You will have opportunities to collaborate with other departments and engineering teams throughout our Agile development process. Come make an impact and be a part of something extraordinary!

Responsibilities

- Design and develop high-quality, scalable web applications using Remix.js and Tailwind CSS.
- Work closely with product managers, architects, and other stakeholders to deliver product capabilities.
- Develop features and enhancements from user stories.
- Participate in design and code reviews, fostering a positive environment with a focus on growth and development.
- Troubleshoot issues, and provide efficient solutions.
- Translate designs and wireframes into high-quality code.
- Optimize components for maximum performance across a vast array of web-capable devices and browsers.
- Report directly to the Head of Engineering

Qualifications

- 6+ years of experience building scalable applications with modern development frameworks such as Remix.js and Tailwind CSS.
- Deep understanding of both modern hooks and class-based components
- Proficiency in browser-based debugging and performance testing
- Experience integrating REST APIs with web applications
- Strong proficiency in TypeScript/JavaScript, including DOM manipulation and the JavaScript object model
- Knowledge of building responsive UIs with modern front-end technologies
- Bachelor's Degree in Computer Science or equivalent experience
