DHA, Karachi, Pakistan, 75500, Karachi, DHA, Pakistan

Base Salary
Rs. 40,000 - Rs. 50,000

Experience
9 am to 6 pm, Monday through Saturday.

Description

We're looking for a **multi-talented Graphic Designer & UI/UX Engineer** who can own the entire design-to-front-end process — from creative concept to clickable UI prototypes. You'll work on everything from mobile apps to full-scale web platforms, blending **design sensibility** with **UI/UX logic**.

This role is perfect for someone who thinks in pixels but builds in code — and who's fluent in **Figma**, but isn't afraid to fire up **Photoshop, Illustrator, or After Effects** to make things pop. You'll collaborate with developers, project leads, and clients to bring ideas to life that are not only visually stunning but also intuitive and functional.

You must be creative, detail-oriented, and excited to bring wireframes to life with **seamless front-end demos** (HTML/CSS/Bootstrap or component frameworks).

Required Skills

- **Figma** (2+ years) – strong in both prototyping and component-driven design
- **Adobe Photoshop & Illustrator** (2+ years)
- **Adobe After Effects** (2+ years) – for motion UI and promos
- **HTML, CSS, Bootstrap** (2+ years) – can build or prototype front-end interfaces
- **Adobe XD** (bonus, but we prioritize Figma)
- **InDesign and InPage** – for print and bilingual publications (nice to have)

Responsibilities:

- Design modern, responsive interfaces for web and mobile using **Figma**
- Translate UI/UX wireframes and prototypes into **front-end code (HTML/CSS/Bootstrap)**
- Create and refine branding assets, digital graphics, icons, and social media visuals
- Collaborate with developers to ensure pixel-perfect implementation of designs
- Create motion graphics or short videos using **Adobe After Effects**
- Maintain consistency across design systems, style guides, and UI libraries
- Stay on top of design trends, usability best practices, and front-end technologies
